Claims 1 and 6, a switch device for use in a flashlight, in combination, comprises a housing, a threaded actuator with electrical contacts, a plunger assembly, and a retaining plunger means as claimed. In which, the switch device operates at a fully closed position, a selectibly closed position, and a fully open position when rotating the threaded actuator relative to the housing.

Claims 2-5 and 7-10 are dependent on claims 1 and 6, respectively.

The limitations discussed above are neither disclosed nor suggested by the prior art of record.

Ralph G. Ostensen [US 3,592,199], Wisenbaker [US 3,835,272], and Shiau [US 5,752,764] discloses a flashlight with a switch device rotating at an end. However, none of them discloses or suggests the switch device being operated at three positions, as discussed above.
